

Martin Hošek

About me

During my Ph.D. studies, I realised that an academic career wasn't the right fit for me. I started intensively studying the Python language, and after finishing my studies, I found a job as a software engineer. During the years, I started to feel more and more confident about my programming skills. The focus of my work has moved from python based scraping to writing chatbots using client provided data. Learning new things has always been my passion; in the case of programming, it feels very natural.

EDUCATION

Doctoral degree/ Physical and Materials Engineering/ Brno University of Technology
Year: 2018 - 2024

Master's degree/ Physical Engineering and Nanotechnology/ Brno University of Technology
Year: 2016 - 2018

Bachelor's degree/ Physical Engineering and Nanotechnology/ Brno University of Technology
Year: 2013-2016

SKILLS

- Python, Laravel, Svelte, Matlab
- Docker
- SQL
- LabVIEW
- LaTeX
- Azure DevOps
- Github

Work experience

Software engineer
WANTED.solutions s.r.o.
May 2024 - October 2026

At first, my work mainly focused on web scraping using Selenium in Python, but lately, it shifted toward using AI for chatbots fed with client data and information. The AI revolution changed my work a lot, but I always focused on using it smartly and making sure I can confidently take responsibility for the deployed code. During the years, I have also focused on my DevOps skills using both git and Azure DevOps tools.

Doctoral student
Institute of Scientific Instruments
September 2018 – August 2023

During my Ph.D. studies, I performed absorption spectroscopy experiments, which ultimately led to the publication of an article in the Optics Letters journal.

Internship
Istituto nazionale di ricerca metrologica
February 2019 – August 2019

During the Freemover course in Turin, Italy, I mainly focused on calculating experimental parameters needed for saturation spectroscopy experiments.
